

Table 1. The mean percentage herbivory of leaf area per plant, and phenology of fall leaf abscission (number of days from October 1 to 50% abscission during 2002, 2004, 2007, and 2014) of native and invasive shrub species in Wildman Woods, Indiana, over multiple years. Within-year rankings of the values for herbivory and leaf abscission for each shrub species are shown in parentheses. Herbivory was ranked high to low, and leaf abscission was ranked from early to late.

	Native						Invasive						Shrub species*
	Lb	Rc	Rs	Va	Vp	Bt	Eu	Ea	Ln	Lv	Rn		
2002	22.0 (2)	6.3 (1)	2.0 (3)	32.0 (1)	32.0 (1)	1.0 (4.5)	4.1 (3.5)	8.0 (3)	5.0 (4)	3.8 (2)			
2004	1.0 (4.5)	5.0 (2)	6.9 (3)	7.6 (1)	20.6 (1)	1.5 (9.5)	2.1 (8)	0.5 (6)	2.1 (5)	0.5 (6)			
2007	4.1 (3.5)	4.5 (7)	13.8 (2)	20.6 (1)	38 (2)	30 (5)	46 (4)	53 (3)	47/10%** (6)	6.5 (4)			
2014	5.2 (6)	10 (1.5)	20 (4)	35 (3)	20 (3)	26 (6)	41 (7)	44/52%** (8)	47/70%** (5)	44/70%** (9)			
2002	31 (1)	14 (1)	20 (4)	35 (3)	30 (5)	38 (2)	46 (4)	61 (4)	24 (3)				
2004	15 (2)	18 (1)	25 (5)	44/90%** (10)	44/90%** (10)	20 (3)	41 (7)	44/52%** (8)	47/80%** (6)	21 (4)			
2007	21 (2)	10 (1.5)	20 (4)	35 (3)	30 (5)	38 (2)	46 (4)	61 (4)	24 (3)				
2014	10 (1.5)	10 (1.5)	20 (4)	35 (3)	30 (5)	38 (2)	46 (4)	61 (4)	24 (3)				

* See Fig. 1 for codes to species names. (Note: *Ligustrum vulgare* [Lv]. Privet was included from 2002 and 2007.)

** The number of days at the last observation for that year and the percentages of the originally tagged leaves remaining at that date. Some plants did not reach 50% leaf drop during the data collection period.

Table 3. Mean physical distance between the studied species in each vegetation type and mean phylogenetic distance between the star species and one closest neighbor, five closest neighbors and all plants in the community in northeastern Mexico. Same letters next to means represent similar means across rows for average phylogenetic distance ($P < 0.05$).

Vegetation type	Average distance to all neighbors (cm)	Average phylogenetic distance (millions of years) to one nearest neighbor	Average phylogenetic distance (millions of years) of all neighbors	Average phylogenetic distance of the five closest species (millions of years)	Total number of plants in contact with the star species	Average number of plants in contact with the star species	Number of species in contact with the star species	Average number of species in contact with the star species
